ABOUT KINGSBOX

Our mission:

Giving people a playground to develop into the best version of themselves.
Delivering products that inspire the masses in the gym industry.

Our vision:

A world where every single one of us is equipped to reach their full potential.

Our values:

We are always looking for opportunities for growth, for improvements and innovations, so these are the values that represent us best.

Driven by Innovation.

Bringing innovative ideas to life is our biggest influence on the world. We are constantly thinking about inspiring the masses with accessible solutions. The more time we have to spend on innovation, the more motivated we are to find the ideal solution. We never stop at an obstacle.

Devoted to growth.

Every single member is encouraged to grow their knowledge, gain new experience and boost their career. We are always looking for opportunities for growth, for improvements and innovations, so these are the values that represent us best;

Going the extra mile.

We put people at the forefront of every decision we make, and we focus on results. Our customers are our inspiration, and we are always aiming for their admiration. Our suppliers and distributors represent to us new opportunities and are a constant source of feedback. Our employees are essential to our growth. We strive for respect, so we ought to be respectful ourselves.

ABOUT OUR RIGS & RACKS

To meet the different needs of all individuals, we created the Home, Royal, and Mighty series, which varies by the dimensions of the steel columns. Each of the series has its series of accessories. So be careful that the series of accessories match the series of racks or rig that you choose.

ROYAL SERIES

60 X 60 MM PROFILE

Our more economical series is the Royal series, made from 60X60X3 mm profiles. This series is dedicated to those who want a more budget-friendly solution but do not want to lose any functionality and quality. With number markings on every 5th hole, you can easily remember the perfect height for your back squats or bench press from the last training. This series is compatible with more than 20 different accessories such as Dip Bars, Angel Arms, and Startup bars...

MIGHTY SERIES

80 X 80 MM PROFILE

The Mighty series is made from 80X80X3 mm profiles and is designed to be our top-tier, maxed-out option for high-performance strength training. All Mighty uprights have holes with laser-cut number markings, so you can quickly adjust the height of J cups, Angel arms, and 40 other Mighty accessories compatible with this series.

Grip

We usually get the best suggestions for improvements when we talk to athletes who use our equipment. Seven years ago, in one of our first competitions, we talked with some athletes, and we found out that they all had a similar problem - a bad grip on the pull-up bars of the rig. It might sound like a small problem, but actually, it was something that got in the way when they tried to show their full potential in competitions.

So we returned home and were determined to create a perfect coating for our pull-up bars. One that offers a firm grip even without a large amount of magnesium while at the same time is not too rough on the skin of one's palms. After months of researching and testing 138 color samples, and working with 29 color manufacturers, we discovered the perfect grip in 2016. We simply call it: KingsBox Grip. Today, this is one of the main reasons why more and more coaches are demanding KingsBox Rig for their gym or competition.

Certificates

All our products are made exclusively from certified materials by qualified and specialized personnel, as required by European regulations. Because of the close collaboration of the design and the production team, it is possible to combine quality, functionality, and refined design in every one of our products.

All our racks and rigs are modular, meaning that as you grow, the gym grows with you too.

Technically advanced, reliable, and resistant, with the possibility of customization. Years of research, development, and design experience have resulted in KingsBox being one of Europe's best-known functional equipment suppliers. All Rigs and Racks are manufactured with the help of modern

technology in order to guarantee maximum precision and high quality.

KingsBox Rigs and Racks are made in Europe (Slovenia). All the equipment in the design phase goes through the prototyping phase, which usually takes a few months to complete.

Once the product has been defined it is first tested by our technical staff and then sent to our best athletes, who assess the product while remaining objective in the evaluation. Thanks to them, we can strive for the continuous improvement, of all our tools. The last step is putting the product into serial production and for sale.

The quality of the products and the notion of being able to offer one of the best services in the field is not just a written idea for advertising purposes, but primarily a fact and a promise that we are committed to keeping on a daily basis.

All products have a warranty period, during which the item can be replaced or returned.

Our hot zinc-plated rigs and racks are made for outdoor use, so you can even mount them at the beach, in your backyard or on the parking lot in front of your gym without worrying about weather conditions. Sunshine, rain, snow, or a tornado – worry about your house and your safety, but certainly do not worry about our Rigs or Racks.

You can choose between a range of colors: Gold, Red, Blue, Green, Yellow, Orange, Grey, White, or Black.

MADE IN EUROPE

Made with passion.

FREESTANDING RIGS

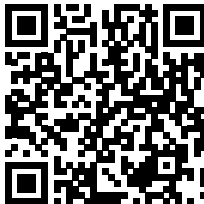

FREESTANDING RIGS

The rig is one of the essential pieces of equipment in every gym: versatile, practical, and highly effective.

Our Royal and Mighty Freestanding Rigs are durable, stable, and flexible. Designed to grow with your needs, they allow you to expand the structure and attach a wide range of accessories to keep your workouts varied and engaging.

If you’re not sure which rig would suit your space best, already have a custom structure in mind, or would like more information about options and pricing, contact us at info@kingsbox.com and our team will be happy to help.

ISO STANDARDS

QUALITY OF THE EQUIPMENT CONFIRMED BY THE *ISO20957* STANDARD

We are 100 % committed to producing quality equipment. All our production of steel parts is based in Europe, which provides faster delivery times, the option to customize equipment, and one of the most important things – fast development of new equipment. To ensure the safety of the new products, we follow the ISO standard ISO20957. In the final stage of the process, we also perform stress tests by the same standard to make sure the equipment withstands all the heavy loads.

M.A.D. RACK

The M.A.D. Rack is the all-in-one centerpiece of the KingsBox rack lineup. As part of the premium M.A.D. Series, it combines innovative design with advanced functionality, integrating some of the most capable features and attachments KingsBox offers.

With this rack, you get exceptional versatility within a compact footprint. It merges the performance of a functional trainer with the stability and reliability of a half rack, creating a complete training station suited for professional gyms, performance facilities, and demanding home gyms.

The M.A.D. Rack is a true showcase of KingsBox expertise, bringing together premium materials, innovative engineering, and uncompromising functionality in one powerful training solution. The result is a powerful rack that performs as impressively as it looks.

OUTDOOR

Warmer days are perfect for training outside, under the sun and in the fresh air, wouldn't you agree? Since we know how it feels to train inside a sweaty place, trying to catch some air between the reps, we decided to design this outdoor rig that will satisfy even the most demanding athletes and their needs.

CUSTOM RIGS & RACKS

It's very simple: When a client has a problem, we solve it.

We can adapt our design to your desires and training style. Of course, we can also give you tips and advice to make sure you choose the construction that best fits your needs. Why are the KingsBox constructions your best choice? The answer is that they can be fully custom-made!

The sky is the limit when it comes to designing and developing new structures. We are aware of the fact that many of our clients have problems with concrete pillars in the middle of the training area or drywalls that are not mountable, but that should not be a reason to panic. We have many existing solutions for such issues, but we can tackle problems on unknown grounds as well.

RIGS & RACKS ACCESSORIES

In the same way, as a knight needs a sword to battle his fights easily, you also need accessories for your equipment to take your training to an even higher level. This way, you can arrange your structures according to your needs. And even add on different accessories through time. Based on the rig or rack that you (want to) have, you can choose between Royal and Mighty series accessories.

GYM BUILDER

Do you have an idea for your new gym but don't have a clue about how to make it a reality? We've got you covered! Together with a team of experts we have developed a tool to help you visualize your training place.

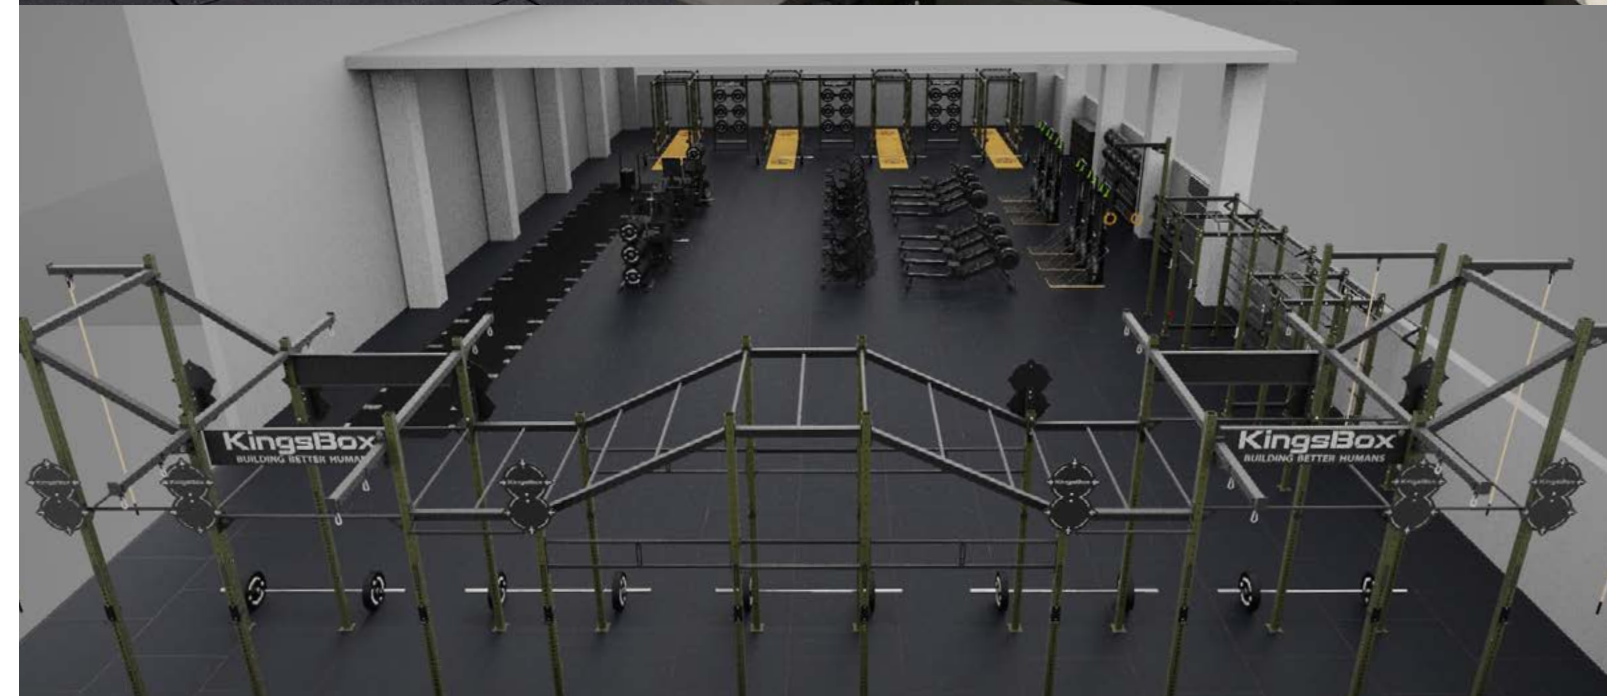

With the gym builder, you can easily draw your floor plan, drag and drop the KingsBox equipment

into it, and turn it into a 2D or 3D render. You can return to your gym anytime and make small or big changes.

After that, our team will prepare the offer for your desired products, and you will be ready to turn your dream gym into a perfect training environment for growing your community.

CERAKOTE

Transforming barbells into art.

Since we are continuously setting new standards regarding the quality and innovation of the Olympic barbells, it is time to present our Cerakote bars. This ceramic and polymer coating specifically enhances some physical performance properties including abrasion/wear resistance, corrosion resistance, chemical resistance, impact strength, and hardness. After a series of tests, the performance of Cerakote is seventy times better than chrome and even a hundred times better than black zinc. Considering that this ceramic coating is used to coat military weapons, it is certainly good enough for our barbells.

Made in Europe.

STACK LOADED PULLEYS

The concept of the classic gym is changing. We noticed a high demand for gyms with functional equipment, that want to include at least one machine to increase the number of possible exercises for their customers. One of them is adding the pulley system into their gym.

Our experts have developed two types of pulley systems, and each of them has so many different combinations. The best part of it is that you can mount them easily on your already existing KingsBox rig, on the wall, or install it as a separate training station.

The main difference between the two types of pulleys is using stack weights or bumper plates that you already have in the gym. Both versions have the option to put a fixed or adjustable pulley system. We also offer a lot of different pulley attachments, which enable you to activate the muscles at different angles.

THE PULLEY TOWER

PULLEY MACHINE

The specialty of this pulley tower is the possibility to combine positions and stations with different pulley systems in any way you want to allow four athletes to train at the same time.

Each pulley station is a little bit different and offers different training options.

The First station is Bridge Tower which has a height adjustable pulley system. So, you can adjust it to adjust it to different heights of the athletes training on it. We named the second station Sling Tower which has a pair of static pulleys, one at the top and one at the bottom of the pillar.

Drawbridge Tower is the artistic name for the third station, the lat pull-down machine that offers training for the muscles in the shoulder area. And the last one is Raw Tower which has an integrated fitness bench and it's used for rowing exercises.

All the pulley systems on the Pulley Tower are weighted by weight stacks. You can work on Drawbridge Tower and Bridge Tower with a maximum weight of 50 kg, the other two stations enable you to train with a maximum weight of 80 kg. You can order additional weight stacks for all pulley systems up to 120 kg per station.

FROM CONCEPT TO COMPLETION: Your Gym Solution Experts

KingsBox is your partner from the initial concept to the final installation, offering expert advice and support through every phase of your project. With over 500 successful projects and more than 40 gyms assembled annually, our experience speaks for itself. We provide mounting solutions across Europe, ensuring your gym is set up for success from day one.

STACK PULLEY SYSTEM

The main advantage of all KingsBox rigs and racks is the modularity of the equipment. You can get a standard squat rack at first, but over time you can upgrade it to a bigger and even more functional training station. One of the possibilities is adding the mighty stack pulley position to your rack and

increasing the number of possible exercises for you or your customers. We've already pre-designed some of the pulley rig combinations with different pulley stations. You can add them to the already existing KingsBox rig, on the wall, or install them as a separate training station.

PLATE LOADED PULLEYS

KingsBox’s top-quality plate-loaded pulley system, made in Europe, is a representative and effective way to build strength and tone muscles. Made with high-quality materials, the equipment offers durability and longevity, making it ideal for both home and commercial use. The pulleys are fully adjustable, allowing users to customize resistance and intensity for exercises such as lat pull-downs, cable curls, and tricep extensions, targeting specific muscle groups. With smooth and quiet operation, KingsBox’s plate loaded pulleys provide a comfortable and efficient workout experience for both seasoned athletes and beginners. Mimicking everyday activities and sports, the equipment offers a representative way to work out, helping to improve overall fitness and achieve health and wellness goals. Whether you’re looking to build chest, back, arm, or leg muscles, KingsBox’s plate loaded pulley system made in Europe is an excellent addition to any strength training regimen.

PLATE LOADED MACHINES

Our KingsBox plate loaded machines are proudly made in Europe, with a focus on top-quality design and construction, offering a representative way to build strength and tone muscles. Our chest press, leg press, and leg extension machines are made with high-quality materials, providing durability and longevity that make them ideal for both home and commercial use. Our equipment is fully adjustable, allowing users to customize resistance and intensity for exercises that target specific muscle groups, such as the chest, legs, and glutes. With smooth and quiet operation, our plate loaded machines provide a comfortable and efficient workout experience for both seasoned athletes and beginners. The machines offer a representative way to work out, mimicking the movements of everyday activities and sports, helping to improve overall fitness and achieve health and wellness goals. Whether you're looking to build upper or lower body strength, our KingsBox plate loaded machines made in Europe are an excellent addition to any strength training regimen.

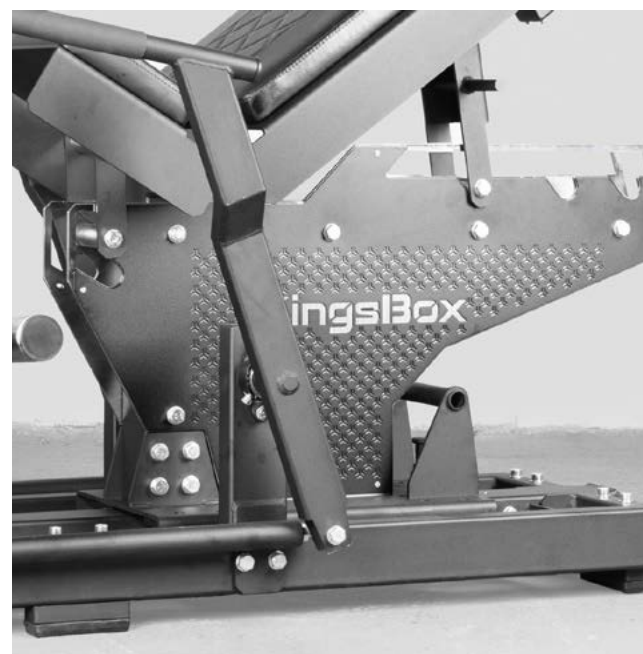

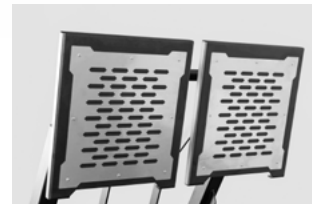

THE MAD KING

LEG PRESS

As the name suggests, this leg press machine is designed for performing the leg press exercise safely and effectively.

You can train each leg separately, preventing the dominant leg from taking the major part of the load. Thus, you can work to minimize the difference between both legs. Like all our machines, this one is also plate-loaded, meaning you can use it with all standard bumper plates.

To make this special machine even more functional, we made it fully adjustable. You can customize the seat length and back pad angle to find your perfect starting position. With handles and adjustable shoulder support, the machine ensures a comfortable execution of the leg press exercise.

The Mad King Leg Press is designed and crafted in Europe using 80 x 80 profiles, a signature of KingsBox quality. The profiles are connected by steel plates, which serve as an excellent connecting element and at the same time give the product the industrial look, which is a recognizable feature of the KingsBox equipment.

Designed and Made in Europe.

THE CRAZY QUEEN

LEG EXTENSION

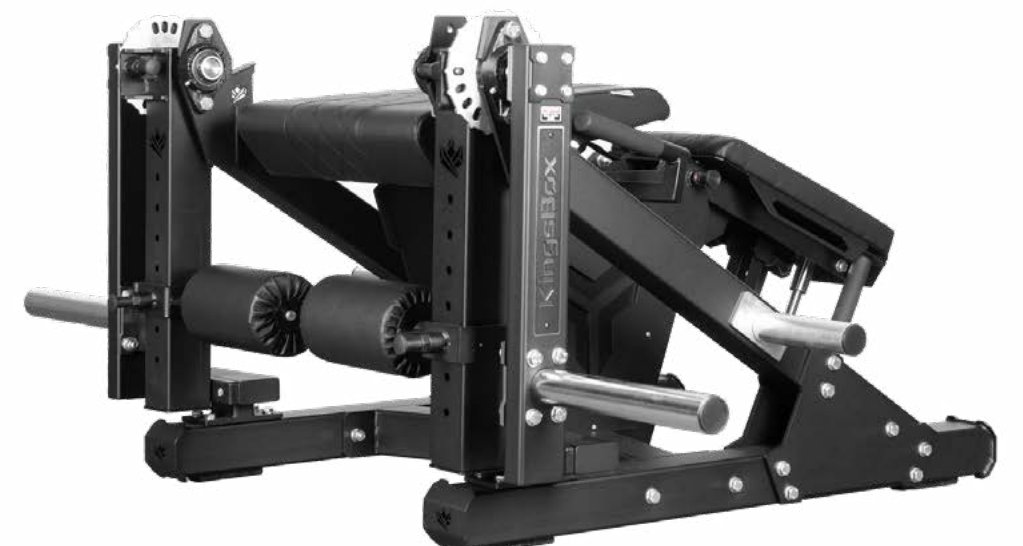

We wanted to stay with our industrial style of design, so we used 80x80 profiles and cutout details that are typical for our equipment. The idea is that the design of the machine matches the rest of your gym.

Like with Mad King you can train each leg separately, preventing the dominant leg from taking the major part of the load. Thus you can work to minimize the difference between both legs. Crazy Queen is a plate-loaded machine. To add weight you use standard weight plates with a 50 mm hole diameter.

Crazy Queen will be most happy by the Mad King's side. Both machines focus on building leg muscles. While the Mad Kings focuses on the leg press exercises, you can do two different exercises with the Crazy Queen.

One is seated leg extension with which you build your quadriceps muscles. But with a quick shift of the seating, you can also perform a lying leg curl. This exercise is focused on the posterior thigh muscle but it also helps train gluteus and hip flexors.

THE SCORPIUS ROW

ROW MACHINE

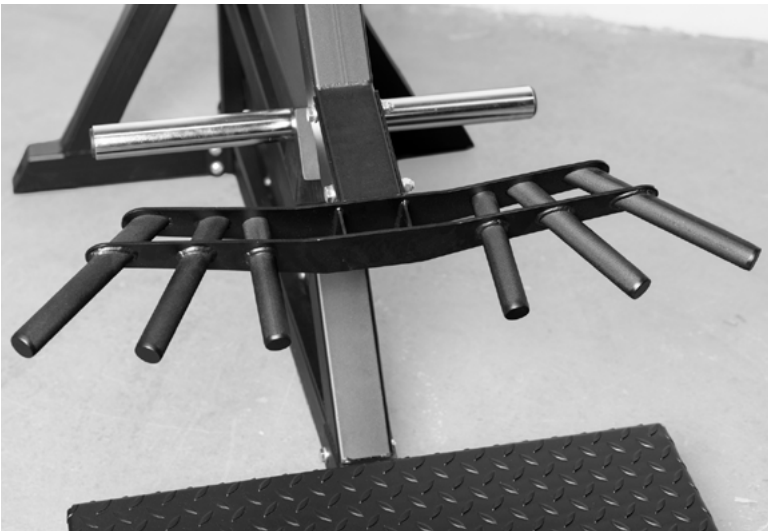

The Scorpius Row Machine is built to strengthen and isolate back muscles, focusing on the upper and middle back. It's designed for bent-over rows with a smooth and controlled pull.

Unlike a traditional T-bar row, this machine has a better ergonomic design. The pivot point is placed high in front of the user, helping maintain a stable posture and ensuring a more natural, ergonomic movement pattern during the exercise. The resistance slightly decreases toward the end of the movement, allowing better control even with heavier weights.

This KingsBox machine has three handle positions (narrow, wide, extra-wide) which offers grip variety and different training options based on your preferences. With the angled foot platform the starting position is even more stable than usual.

The Scorpius Row is a plate-loaded machine, compatible with all standard weight plates. Its unique design, inspired by the shape of a scorpion and the Scorpius constellation, gives it both its name and its unique look.

An effective and powerful machine from the KingsBox Mad Series is a great addition to every strength training gym.

THE FIERCE PRINCESS

HORIZONTAL ROW

The Fierce Princess represents an exceptional addition to the KingsBox Mad Series. This horizontal rowing machine is engineered to assist you in achieving your fitness goals, providing comfort, versatility, and unparalleled performance.

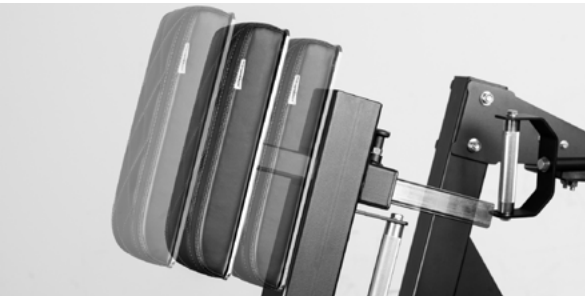

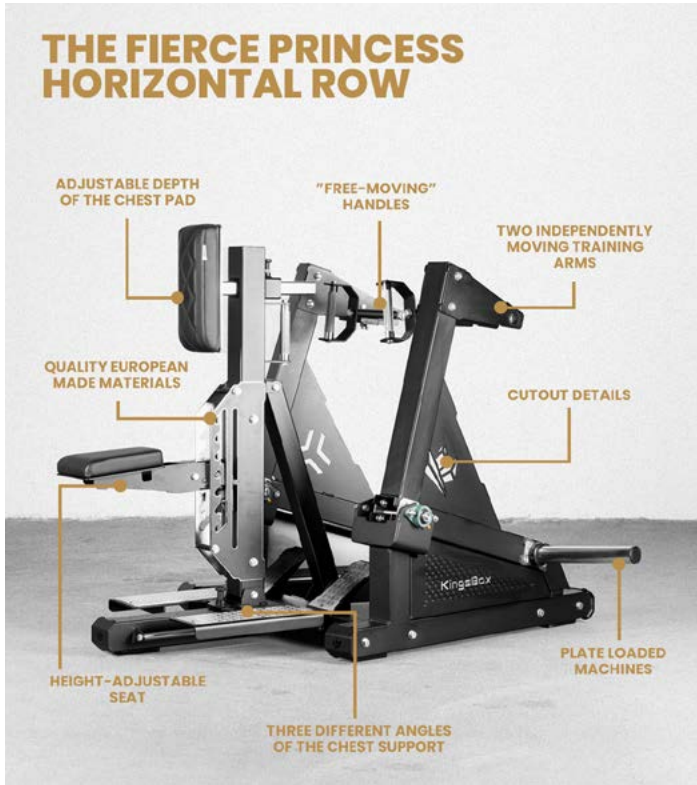

Like all machines in our Mad Series, the Fierce Princess boasts unilateral functionality, with two independently moving training arms. This allows for targeted exercises on each side of your back muscles individually or together, ensuring optimal results.

The machine also features “free-moving” handles that accommodate the exercise’s natural movement path. Rotating grips on the handles enhance muscle contraction and prevent awkward wrist positions. Like all our machines, the Fierce Princess is plate-loaded, enabling use with existing plates in your gym.

Key features of adjustability in this machine’s design include:

- Height-Adjustable Seat: Ensures users of all sizes can find their ideal positioning.
- Adjustable Chest Pad Depth: Allows for customization to achieve maximum stretch and comfort during exercises.
- Customizable Chest Support Angles: Offers three different angles to target specific back muscles, including the traps, lats, and upper- and lower-back areas, depending on the angle chosen.

THE DARING DUKE

SHOULDER PRESS MACHINE

Meet the Daring Duke, the ultimate strength machine for shoulder muscle training. This plate-loaded shoulder press machine focuses on isolating and sculpting your shoulder muscles.

Its robust design ensures minimal maintenance and maximum durability, making it an excellent investment for gym owners and fitness enthusiasts alike.

This machine is designed to target the deltoid muscles- front, side, and rear- along with the triceps and upper chest. It's perfect for lifters of all levels, from beginners (looking for safe and controlled movements) to advanced athletes (pushing their strength to new heights).

Designed by our engineers, with input from top coaches and athletes, the Daring Duke ensures optimal biomechanical movement for a unique and effective workout experience.

The Daring Duke stands out with its customizable features, like adjustable support arms with implemented gas springs for easy manipulation and adjustable seat height. It even allows for unilateral exercises, helping to address muscle imbalances and improve coordination.

The Daring Duke was built with three key benefits in mind:

- Muscle Development: It isolates shoulder muscles for optimal strength and mass building;
- Controlled Movement: The guided path ensures proper form, minimizing injury risks and making it ideal for everyone from beginners to those recovering from injuries;
- Joint Safety: Its design supports natural biomechanics, reducing strain on your joints and lower back.

THE WICKED LORD

PLATE LOADED TRICEPS KICK-BACK MACHINE

The Wicked Lord is KingsBox's plate-loaded triceps kick back machine, completely designed and made in Europe. Built to isolate, strengthen, and grow your triceps.

It uses a fixed pivot system that guides your arms through a natural arc. Unlike free weights or cable machines, it prevents swinging and limits shoulder involvement, keeping the focus entirely on the triceps.

To improve comfort and ensure proper muscle activation, we designed the handles to be adjustable to 90° or 70° angles. This allows you to target different parts of the triceps while maintaining a natural wrist position and reducing joint stress.

For maximum stability, the machine features adjustable back and shoulder pads that lock your upper body in place. The gas-assisted adjustment system lets you set the correct height quickly and effortlessly, ensuring proper positioning for every user.

A wide wooden platform with a non-slip surface provides a secure and stable base, even when training heavy.

The Wicked Lord is ideal for commercial gyms, boutique studios, and performance centers that prioritize precision, stability, and serious arm development.

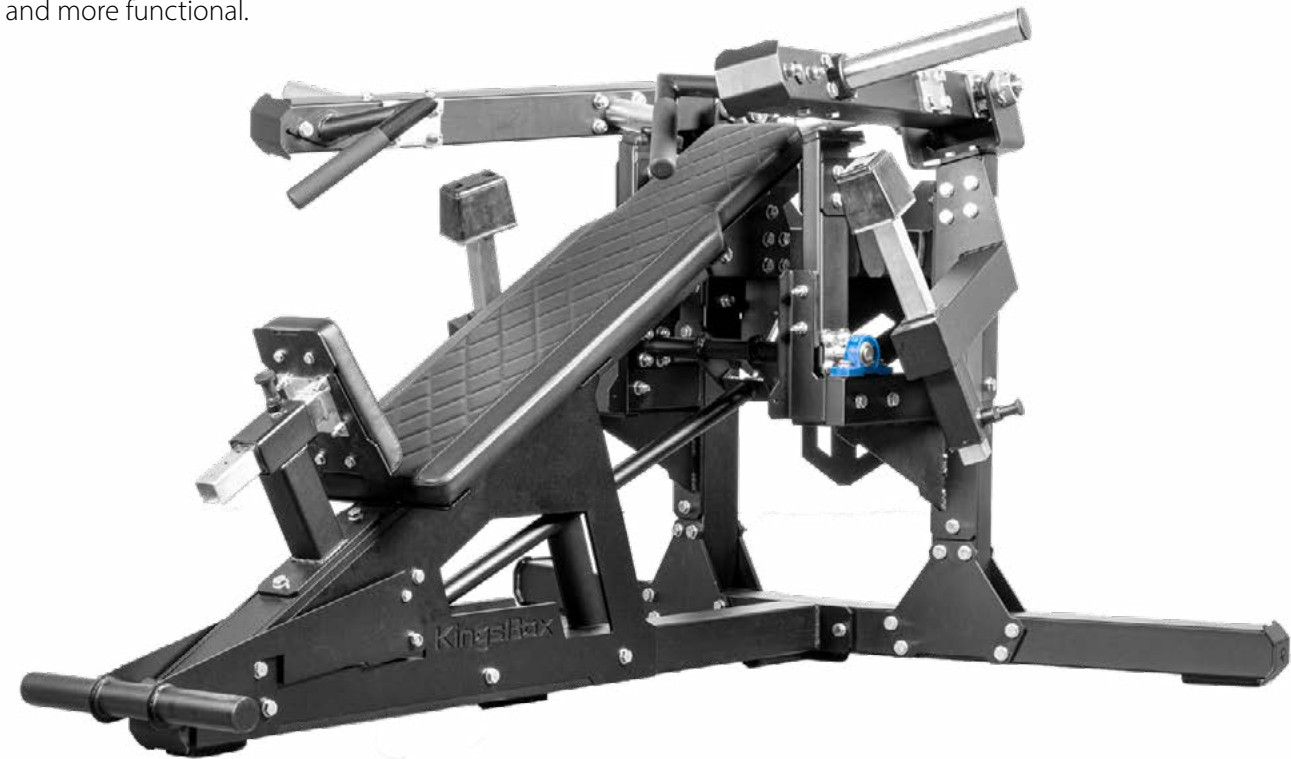

THE SAVAGE PRINCE

INCLINE CHEST PRESS

The Savage Prince is the third machine in our Mad series. Like with all our machines, we wanted to make it special and more functional.

Just like Mad King and Crazy Queen, it is plate loaded. This means that you can use it with the plates from your gym. To offer you the best experience from the start, we came up with the “easy start” function, which helps you enter the machine easily and allows you to start exercising from a comfortable position. At the same time, it prevents uncomfortable movements that often lead to injuries.

The main advantages of this machine are different options to increase your range of motion to train and target specific muscles. You can do that by using 2 different grips and adjusting the security height.

The Savage Prince machine is designed and made in Europe from a high-quality material that assures minimal maintenance and long product life.

SMITH MACHINE

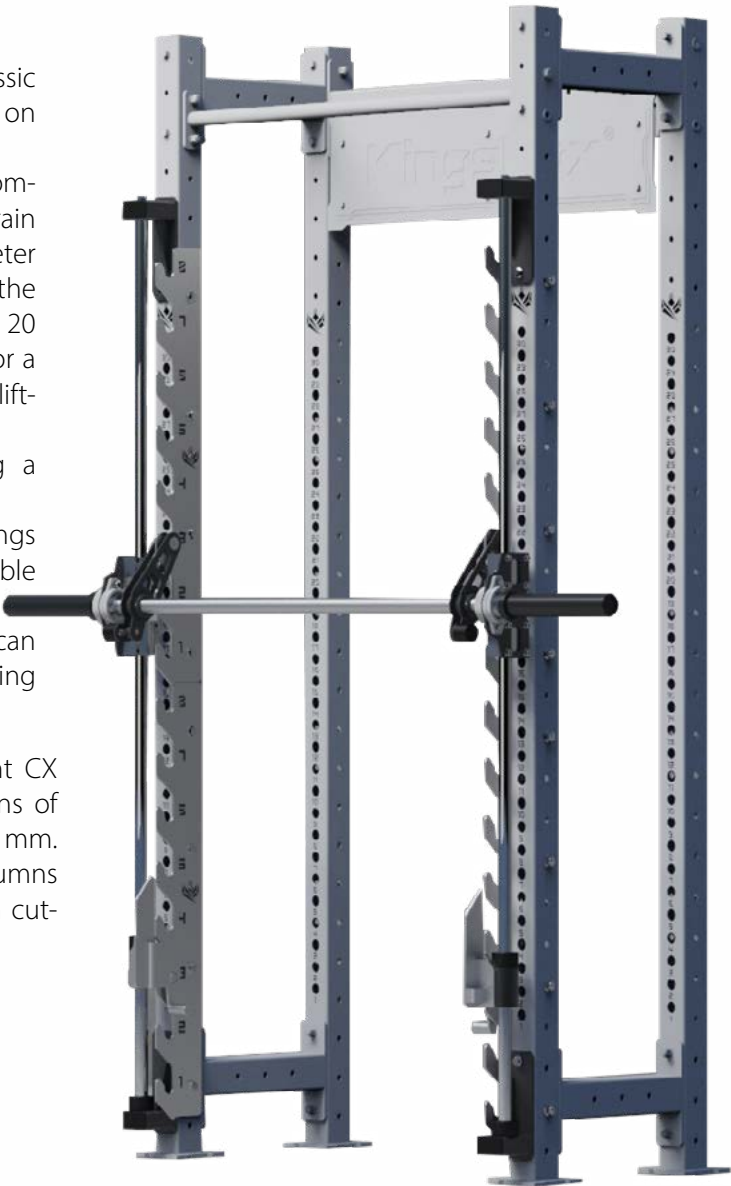

The Smith Add-on is our version of the classic Smith machine, designed to be mounted on Kingsbox cages with a width of 1100 mm. The 35 mm diameter bar provides a more comfortable workout, as it reduces shoulder strain during squats. Thanks to the larger diameter and a smart choice of materials, we kept the bar's weight (including bearings etc.) under 20 kg. The lower weight eliminates the need for a counterbalance, resulting in a more natural lifting experience. The bar is hard-chrome plated, ensuring a long-lasting attractive appearance. The bar is guided by four ball linear bearings housed in aluminum casings, ensuring durable and problem-free operation. Adjustable drop stops provide safety and can be set as the downward travel limiters during various exercises.

Suitable for mounting on standard Upright CX Mighty 2500 columns or shortened versions of columns up to a maximum height of 2148 mm. Can be mounted on 2750/3600 custom columns (custom columns with the Kingsbox crown cut-out instead of the plate are required).

Specifications

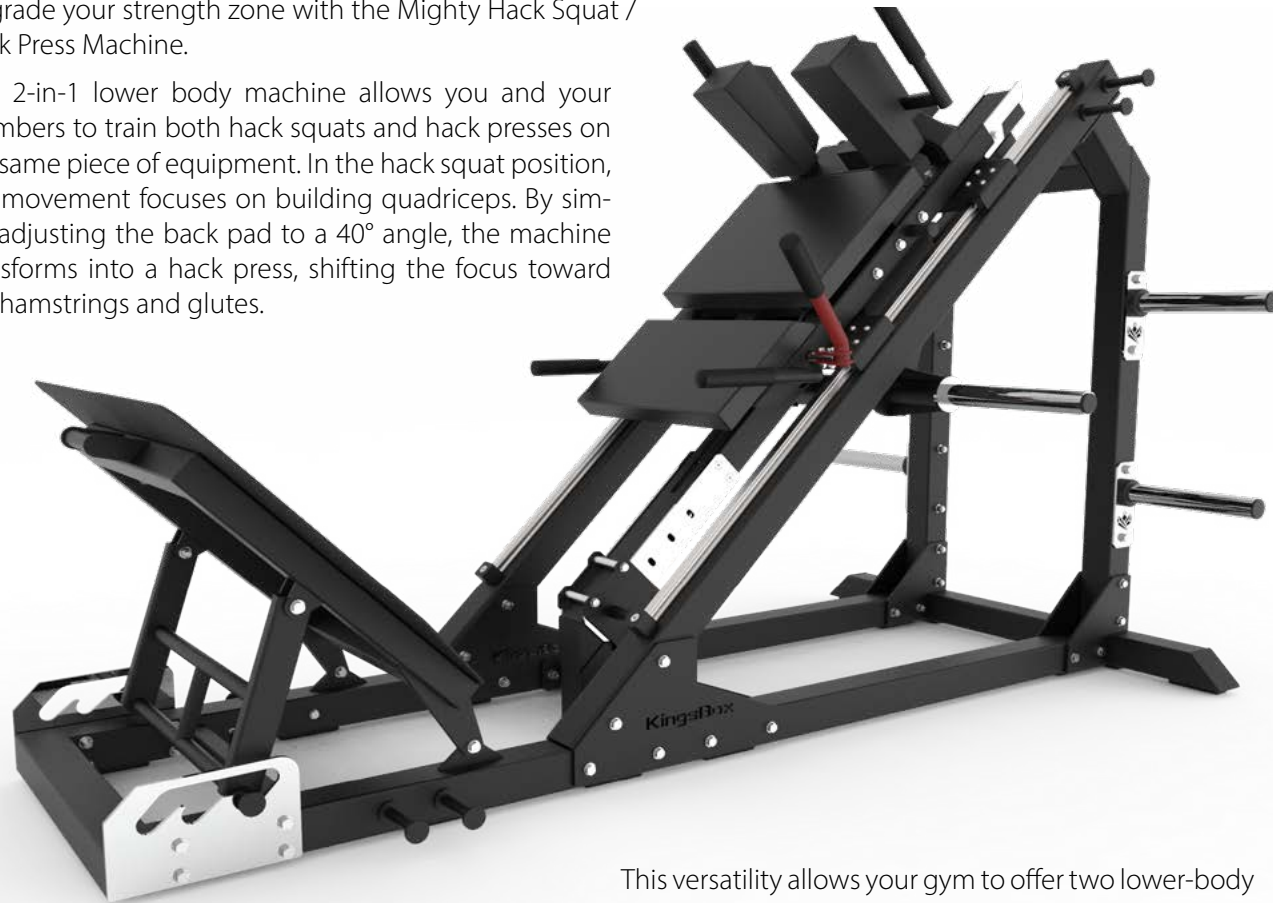

- Bar weight (movable mass): 19.7 kg
- Max weight: 150 kg
- Bar diameter: 35 mm
- Sleeve diameter: 50 mm
- Finish: Hard chrome
- Max bar height (bar center): 1980 mm
- Min bar height (bar center): 360 mm

THE MIGHTY HACK SQUAT / HACK PRESS MACHINE

Upgrade your strength zone with the Mighty Hack Squat / Hack Press Machine.

This 2-in-1 lower body machine allows you and your members to train both hack squats and hack presses on the same piece of equipment. In the hack squat position, the movement focuses on building quadriceps. By simply adjusting the back pad to a 40° angle, the machine transforms into a hack press, shifting the focus toward the hamstrings and glutes.

This versatility allows your gym to offer two lower-body exercises on one machine, saving space while expanding training options in your strength area.

To ensure safe training for users of all levels, the machine includes four starting positions and five safety stops that allow full control over squat depth. The 45 kg trolley weight creates a solid base resistance, while elastic band hooks allow you to reduce the effective load when needed.

Key Features

- 2-in-1 functionality: Easily switch from hack squat to hack press by adjusting the back pad to a 40° angle
- Adjustable back pad: Additional angles (7.5° and 15°) for improved comfort and deeper hip flexion during hack squats
- Adjustable foot platform: Three angles (45°, 40°, 35°) to adapt ankle position and squat mechanics
- Elastic band hooks
- 5 safety stop positions
- Integrated plate storage to store your plates.

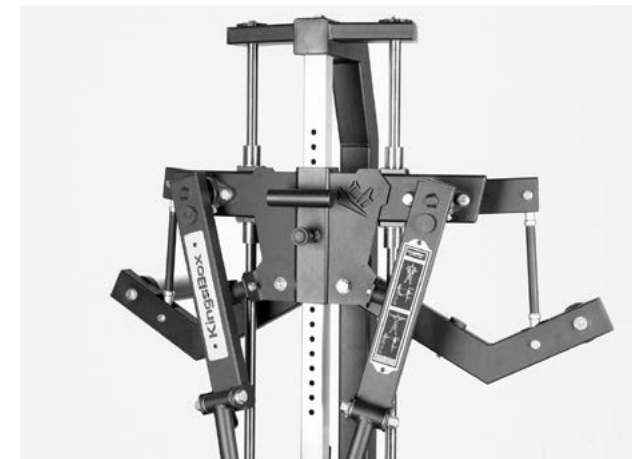

MIGHTY OLIPHANT LATERAL RAISE

Unilateral and plate loaded machine

Our latest member of the Mad Series, the KingsBox lateral raise machine, offers a unique feature for shoulder workouts, allowing users to exercise each shoulder independently. Like all the other machines in the same series, it is designed to be loaded with standard Olympic plates.

Enhanced Exercise Control

Too many times we see gym enthusiasts performing the dumbbell raises without full control, swinging the whole upper body to help themselves lift a dumbbell too heavy for them. Our lateral raise is solving this issue as the resistance at the handles mimics the natural strength curve of shoulder muscles – these are stronger at the beginning and weaker at the end of the lift. The machine, via the linkage system, gradually adapts the resistance as the arm is going up – this gives the athlete control over the whole exercise motion and enables him to perform an exercise stably and effectively.

3 Exercises in 1 Machine

We designed the lateral raise in a way, that you can target all three shoulder muscles: the anterior, lateral, and posterior deltoids. This allows you to perform the three most essential shoulder exercises— front raises, lateral raises and posterior raises – on a single machine.

Easy-to-adjust height mechanism

To accommodate users of different heights and preferences, the machine features an easy-to-adjust height gas spring mechanism.

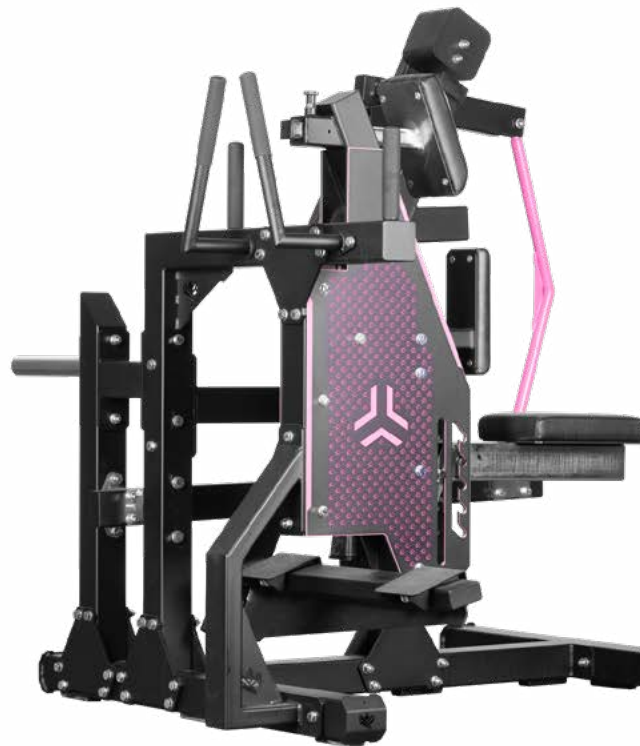

Designed for Efficiency and Convenience

With a compact design measuring 100x115cm, the lateral raise is built to fit efficiently into any gym space without compromising functionality. Additionally, it includes bumper sleeve storage, helping to keep the workout area tidy and organized.

THE DIVINE DUCHESS

BOOTY KICKBACK MACHINE

Meet The Divine Duchess, a proud member of the KingsBox Mad Series. This plate-loaded kickback machine is made in Europe and designed to isolate, strengthen, and grow your glutes. Inspired by the classic cable kickback, we engineered this machine to offer a smooth, biomechanically tested movement that targets the glutes through their full range of motion.

The Divine Duchess features a pendular movement path that minimizes knee flexion and extension, isolating the movement primarily to the hip joint and effectively targeting the glutes.

To create a consistent challenge during every repetition, we optimized the resistance so that it is heavier at the beginning of the movement—when the glutes are stretched and strongest—and lighter at the end, where they naturally weaken. This results in a smooth, natural movement without the common “resistance drop” found in many selectorized kickback machines.

The starting position on The Divine Duchess is kneeling, which provides superior support compared to standing variations. The knee, quad, and chest pads, together with hand grips, create the necessary stability and comfort to let you focus purely on driving the weight with your glutes.

The foot support is adjustable in height to optimally suit all individual sizes and limb lengths, ensuring the proper starting position for every user.

We have integrated bumper storages right next to the loading horn, keeping your training area tidy and making the loading and unloading process quick and efficient.

The Divine Duchess is ideal for gyms, boutique studios, and training centers where members focus on specific muscle groups, especially glute development and lower-body isolation work.

For custom frame or pad colors, contact our team at info@kingsbox.com

KINGSBOX PREACHER CURL BENCH

The first preacher bench on the market with a fully height-adjustable support pad, designed to fit every user perfectly. Unlike fixed benches that compromise comfort and biomechanics, we created an innovative solution that adapts to different arm lengths and body heights—ensuring safer and more effective training.

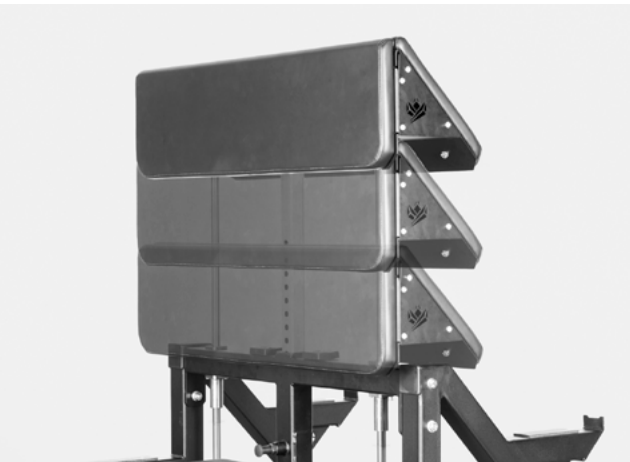

You can lift the mechanism with the pillow very easily with an integrated gas spring. Dual linear guides with bearings ensure smooth, play-free movement and maximum stability, even under heavy loads.

Train from two distinct positions on one machine:

- 35° angle for classic preacher curls
 - 90° vertical angle for intense top-range isolation
- Simply rotate the bench to switch angles, optimizing workout flow and gym space.

The foldable seat allows you to perform both seated and standing variations. With a quick pull of the pin, the seat folds down, giving you full freedom of movement and full-body stability during standing exercises.

Meet the Mad Throne – the latest member of our Mad series. With its incline range, you can use it in a completely vertical or declined position. And you can do that easily with easy-to-use pins. The bench can be easily mounted and stored vertically by the wall.

The Mad Throne Adjustable Bench
Article no: KB06MI-025

THE MAD THRONE

SUPER ADJUSTABLE BENCH

With additional attachment for legs and options to use elastics on the bench, the range of exercise options is even wider. With the KingsBox recognized design and cutout details, this bench will stand out in every gym. **Made in Europe.**

KingsBox Fitness Bench is more than just a bench. It's a compact training station with built-in storage, ideal for home or commercial gyms where space and functionality matter. The bench is easy to move even when fully loaded, thanks to wheels on both sides.

- Storage includes:
- space for 4 pairs of hex dumbbells (5 kg, 10 kg, 15 kg, 20 kg)
 - a large compartment under the cushion for a kettlebell, slam ball, or battle rope
 - dedicated storage for a yoga mat
 - a small compartment for bands, a phone, or personal items

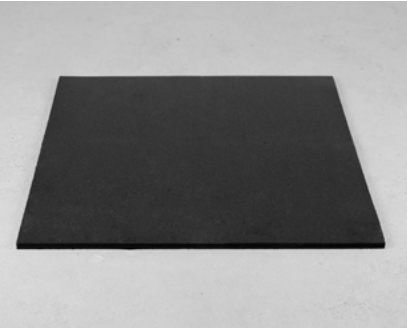

Handles on the back allow you to hang a battle rope and quickly include it in your workout. The adjustable backrest offers 3 angle positions for greater training variety. Built in Europe from durable, high-quality materials, designed for long-term use.
